**Phoenix Showcases 'Secure from the Start' Platform at Embedded World 2005 Conference; Company's Award Winning Software and Tools Enable Faster, More Reliable Deployment**  
*By Business Wire*

Phoenix Technologies Ltd (NASDAQ: PTEC - news) . (NASDAQ (NASDAQ: news) : PTEC) today announced innovations and partnerships that should help manufacturers and system builders create secure digital devices that achieve higher performance while consuming less power. Phoenix (Xetra: 603100.DE - news) 's Embedded Core System Software will be available on the AMD Geode(TM) family of processors, starting in April 2005. The combination of Phoenix Core System Software and AMD Geode GX's advanced core delivers superior computing security, performance and reliability for digital devices requiring low-power consumption.

Phoenix made its announcements today at the Embedded World 2005 Show in Nuremberg, Germany, where the company is displaying its new offerings in Stand 11-402.

The company also highlighted the growing momentum for its Embedded Core System Software solutions due to their ability to enable, protect, and recover digital devices. Russian industrial automation and electronics leader Fastwel Company Ltd. has adopted Phoenix Embedded Core System Software for use in its railway transportation and other embedded applications. Fastwel, a contract manufacturing pioneer based in Moscow, worked with Phoenix Trusted Partner Eltan B.V. to meet the demanding needs of its customer for reliability and security in the harsh environment of the Siberian Railroad.
